Bank Frick WebAPI interface

Using the Bank Frick WebAPI interface, all important online banking information can be obtained and loaded directly into the user's own software, such as accounting software. The API also makes it possible to record and sign payment orders and obtain account information in simplified JSON format or as a standardised camt report (XML) without having to log in to the online banking front end.

Specifically, the API offers the following functions:

→ Listing of all transactions (cash/securities)

→ Downloading of transaction reports

→ Recording of transactions

→ Recording of stock exchange orders, including cryptocurrencies

Users can choose between two different formats:

→ ISO20022 as XML (read by most accounting programmes)

→ JSON format (easier to implement)

Target group

Clients that have their own software with the ability to connect to this API.

Type of access

Via programmer interface

Contract

Supplemental contract 16.2 mandatory if transactions or stock exchange orders are to be recorded.

Fees

Variable
