

# Half-yearly results – H1 2021

AGA 2

## Report of the Management Board

Bank Frick generated a net profit of CHF 3.1 million in the first half-year. All strategic business segments contributed to this long-term result. For 2021, we therefore expect an annual profit in the order of CHF 5 million. Thanks to the successful reorganisation initiative of the departments involving direct client contact, we have been able to pay even closer attention to the client experience.

Bank Frick looks back on a very successful first half of 2021. This success stems mainly from the strategically occupied business segments and therefore making it long-term. In addition, we benefited from the volatility in the markets. This resulted in a net profit of CHF 3.1 million. Additionally, client assets increased by over CHF 1 billion this year and amounted to CHF 4.464 million on 30 June 2021. We were able to further increase our number of clients and net income also grew in line with recent years. The very pleasing half-year result is a clear sign that the implementation of our strategy, which is based on the traditional and blockchainbased world, has been a complete success.

### Through this reorganisation initiative, we are improving our service offered to our clients

To ensure that we remain this successful in the future, it is vital for us to focus even more on the client experience – that is, the experience when clients are in contact with Bank Frick. For this reason, we adapted our vision, our mission and, above all, our guiding principle at the beginning of 2021. Furthermore, last year we analysed how we can further optimise and expand our client service. One result of the analysis was that we were able to position our departments involved with direct client contact even more efficiently in order to optimise client benefit. This analysis led Bank Frick to reorganise the departments with direct client contact in recent months. This reorganisation initiative came into effect in June. The most obvious innovation is the establishment of the new Client Services department. Client Services focuses on providing our clients with professional support, competently answering all their questions and making banking as easy as possible for them.

In addition to the Client Services department, the two departments Classic Banking and Blockchain Banking were formed. Together with the Fund and Capital Markets and E-Commerce departments, these four departments are in line with our strategic business segments. The know-how is consolidated in these departments and they are all responsible for taking up the clients' needs and finding tailor-made solutions for them, even beyond the boundaries of the respective business segment.

In recent years, we have made significant investments in technology, regulatory issues, compliance and the establishment of new business models. Thanks to our reorganisation initiative, we can serve our clients even more efficiently. Furthermore, with these changes, Bank Frick is setting the organisational stage for continuing to develop new business models and products that are highly competitive in the international context. We want to be the bank for financial intermediaries in Liechtenstein and further consolidate our standing among independent custodian banks. We want to remain a significant banking partner for blockchain companies in Europe and further strengthen this position. We want to work in partnership with our clients and strive for a longterm and successful relationship with them. And with all our strategic progress, we will remain flexible in order to be able to respond to new market opportunities, in a manner fitting for a bank that thinks in an entrepreneurial way.

### Bank Frick now fully familyowned again

Since the beginning of February 2021, Bank Frick is once again fully owned by the Kuno Frick Family Foundation (KFS). Net 1 UEPS Technologies, Inc. (Net1) sold the 35% stake it held in Bank Frick to KFS. The Frick family therefore once again controls all shares in the Bank. Upon completion of this transaction, Alex Smith (CEO of Net1) left the Board of Directors of Bank Frick.

Net1 acquired a total of 35% of Bank Frick's capital stock from KFS in 2017 and 2018. The 2017 purchase agreement also provided for a purchase option of an additional 35%. Net1 exercised this option in October 2019. Shortly before the purchase was to be completed in April 2020, Net1 withdrew from its offer to acquire a majority stake in Bank Frick. The background to this was Net1's new strategy, in which the European market no longer plays a role; this strategy was clearly very much shaped by anticipated development of the South African business in light of COVID-19. This resulted in only a few points of contact between Net1 and Bank Frick.

### Being managed by a family adds value

As a bank, we have learned that our clients and employees see clear added value in a family-run bank. This was clearly illustrated by reactions from clients as well as a survey taken among employees. As the shareholder, the Frick family provides a sense of stability. This shareholder structure creates clear lines of responsibility, bolsters the trust of clients and employees, and guarantees that decisions can be made quickly. KFS is not out to make a guick profit but geared toward the long term. Nevertheless, it is within the realm of possibilities that KFS could allow a strategic minority partner to take a stake sometime in the future. However, it is necessary for this participation to fit the Bank and for the partnership to be intended for the long term. What's important for both KFS and Bank Frick are continuity and reliability. Clients of Bank Frick as well as bank employees want and should know where they stand.

### Balance sheet

Our balance sheet total amounted to CHF 2.751 million as at 30 June 2021

which was 89% higher compared to the balance sheet total on 31 December 2020. Client deposits in particular – largely from crypto transactions – led to the increase in the balance sheet total. Most of the growth is in overnight deposits, meaning that we are expecting some volatility in the second half-year.

### Client assets under management

Client assets under management increased by CHF 1.193 million in the first six months of the 2021 financial year to CHF 4.464 million as at 30 June 2021. The increase results in particular from new business in all business segments. We also benefited from the high volatility in the markets – especially in the crypto sector.

### Net new money

The net new money inflow amounted to CHF 962 million as at the reporting date. The inflow of client assets was achieved in particular thanks to new clients as well as inflows from existing clients.

### Sources of revenue

### Fund and Capital Markets

The Fund and Capital Markets department recorded exceptionally strong growth in the area of custodian and depositary bank services for Liechtenstein funds. Funds under management that were domiciled in Liechtenstein amounted to around CHF 1.512 million as at 30 June 2021 (compared with CHF 797 million as at 30 June 2020). This corresponds to an increase of around CHF 350 million compared to 31.12.2020.

In the issuing business for other securities offerings (with a focus on debt capital transactions), we also observed a strong increase in business volumes. We were therefore able to win 22 new paying agent mandates in the first half of 2021. This brings the outstanding issue volume from own and third-party issues to around CHF 1500 million as at 30 June 2021 (compared to around CHF 418 million as of 30 June 2020).

### **Classic Banking**

The department of Classic Banking (operating under the name Private Clients and External Asset Management until June 2021) was also responsible for servicing existing clients until this reorganisation initiative. These tasks have now been taken over by Client Services. The department of Classic Banking now focuses on business development of financial intermediaries and professional clients in the area of classic banking.

It had an excellent first half-year, growing assets in its core markets in collaboration with financial intermediaries, such as trustees, asset managers and lawyers. This department has already started to strengthen its staff in order to be ready for further growth and to continuously provide a first-class service to selected clients and business partners. As well as this, it has benefited from Bank Frick's crypto service offering. Traditional banking clients and established financial intermediaries are becoming increasingly interested in investing in digital currencies. Bank Frick sees itself as the first point of contact in Liechtenstein when clients of financial intermediaries want to invest in cryptocurrencies.

#### Blockchain Banking

The price of cryptocurrencies went up and down in the first half-year. Bitcoin, for example, rose by 125% from December 2020 to April 2021, lost 46% of its value in the second guarter, and then experienced an upward trend again. This volatility in the market has had a very positive impact on client activity in cryptocurrency trading and, accordingly, has led to a strong increase in trading volumes. Demand from companies in the corporate blockchain sector has been steadily rising. It is also evident that individuals and organisations holding large assets in cryptocurrencies are increasingly seeking traditional banking services to diversify their asset allocation. Our strong market position and the growing demand associated with it made it necessary to hire additional staff for the second half-year in order to meet this demand, and all this in the spirit of an excellent client experience.

### E-Commerce

The E-Commerce department works mainly with licensed payment facilitators and strengthened existing partnerships in the first half-year. The first half-year marked a huge success and we have been able to increase turnover by 37% since mid-2020. Following the forced disintegration of Net1, E-Commerce had to realign itself and is now contributing financially to Bank Frick's success. In January, the new client authentication requirement became mandatory for e-commerce transactions under the Payment Services Directive (PSD2). We have been working with all merchants to comply with the policy and ensure full compliance. Furthermore, with the integration of the ACI Worldwide processing platform, we are now able to offer American Express as an alternative payment method to our merchants. We also successfully passed the annual Payment Card Industry audit with no comments from the auditors.

### Events after 30 June 2021

### Bank Frick processes donations in the form of cryptocurrencies

Since July, Bank Frick has been processing donations in the form of cryptocurrencies for the Swiss section of the human rights organisation Amnesty International. For this purpose, we have developed a set-up that enables the reliable, regulatory compliant and secure acceptance of crypto donations. The model is suitable for all NGOs and allows for careful verification of the origin of crypto donations.

## Outlook for the second half of 2021

We are very satisfied with the generated net profit of CHF 3.1 million. This result confirms that we are in a very stable position as a bank and that the investments in staff, infrastructure and IT as well as the development of our regulatory know-how are paying off. We are therefore very pleased that all strategic business segments are making a long-term contribution to this success.

For the second half of the year, we therefore expect a similar development as in the first six months. We do not expect the aforementioned extraordinary items to have the same impact on income as in the first half-year. Based on this starting position, we expect annual results in the order of CHF 5 million. Due to the uncertain times, however, we budgeted conservatively for the year 2021 and assumed a profit of CHF 3.1 million.

In addition to this extremely promising result, we also see major challenges ahead of us. Various regulatory projects and the expansion of our digital interaction with clients will keep us very busy. We are, however, well equipped financially and in terms of staff, so we are facing these challenges with great confidence. We will continue to invest in staff, projects and infrastructure to help continuously improve our client service

The second half of the year will also be marked by growth. We will focus on the further development and expansion of our highly efficient departments with direct client contact and continuously optimise the processes throughout this reorganisation initiative, whilst making the best possible use of our resources, and all this in the spirit of a client experience. Due to the very good order situation and the consistently high workload completed by our employees, we are planning to create various positions and expand the existing organisational units.

The traditional financial world is continuing its march towards consolidation with blockchain-based assets. By continuously monitoring the market, we ensure that our solutions meet the quality requirements of our clients and can survive in a regulated framework. We continue to work every day on further ways to connect the traditional financial world with blockchain-based assets.

A long-term, successful business relationship is based on classic values such as trust and reliability. As a 100 per-cent family-run bank that has been active in the market for more than 20 years, we now have one foot in the blockchain world and the other in the world of classic banking. We have therefore succeeded in creating a solid foundation and are equipped for being a bank for the future.

Edi Wögerer CEO
